My transmission was a bit noisy before and its much quieter now. I bought my car used and the transmission started getting noisy. Took it to my mechanic and he checked the fluid and said it had gear oil not transmission fluid. He flushed it using Honda MT fluid and told me that Hondas need to use Honda fluid. He recommended for me to drive the car for a few hundred miles and flush it again to help get the rest of the dirty gear oil out so I bought some here on Amazon and just that. Glad I did cause this time around it made a difference. Im going to change flush it every 30k from now on.It is a civic lx with the 1.7L engine and manual transmission. I have driven about 50,000 miles and decided to change the transmission oil after the axle broke. The fluid that came out of the transmission was just as clear, and clean as the fluid that went in after 4 years. There were no metal flakes, no burnt smell, it was still viscous, and looked new. I cant say much about the other stuff out there, but this has worked great, and I will continue to use it.Im a manual transmission freak and all my cars have been and are manuals. Ive experimented with many fluids including motor oil but this Honda fluid seems to me, to be the best at everything for manual transmissions.Even if it is a manual. Unlike me I didnt and now I might have to suffer the consequences.This is what is recommended for my 2011 Honda CRZ. I can handle that little job. I will be buying this again.If I stepped on it hard sometimes it wouldn't wanna go into 2nd and sometimes 3rd. So I did some research and most forms said try replacing the transmission fluid. So far since I changed the fluid the car shifts a lot better. Ran the car hard and no problems with any of my gears. My car is roughly at 174,000 miles on it. And the transmission still running strong. Definitely recommend.Sorry, we

NOT about the products that were specified, but because they didnt match and when the called the dealer the dealer agreed it was a mismatch. CRAZY. BUT dealers are allowed to recommend the better product. Amsoil MTF. Did you purchase an Amsoil 10w30 of some sort PS Using motor oil is okay, great to swap over. Id still recommend going to Amsoils MTF eventually, though the 10w30 isnt necessarily an issue either just less Friction Modifiers so shifting might not be as good as with an MTF lube. Its an automatic, with 1, 2, and OD.

Its not shifting in OD and I want to check the fluid but cant find where it is Thanks for any It was super hard for If youre standing Its not shifting in OD The mileage on When I try to drive the car from a standing position, the gears on the on the I have taken it to the honda dealer where I live and have yet to find a good transmission. 2 have already failed. ZF has attributed most of these problems to software issues. Hondas older transmissions such as the Hondamatic semiautomatic transmission and its successors use traditional, individual gears on parallel axes like a manual transmission, with each gear ratio engaged by a separate hydraulic clutch pack. This design is also noteworthy because it preserves engine braking by eliminating a sprag between first and second gears. The Hondamatic incorporated a lockup function, which Honda called a third ratio, and had manual gear selection. The companys early transmissions also used a patented torque converter which used stator force to reduce hydraulic losses by using a reaction arm to increase the hydraulic pressure when the stator was stalled. The reaction arm acted directly on the regulator valve this meant that increased pressure was available to the clutch plates when torque multiplication was greatest. The stator was equipped with a sprag clutch enabling it to freewheel when required. This torque converter was nominally about 7in. It was initially announced in Europe as an automatic as the staff at Honda in Europe assumed that it would like the N600 to be fully automatic. This gearbox was a separate unit and used ATF Automatic Transmission Fluid. Retrieved 18 December 2017. By using this site, you agree to the Terms of Use and Privacy Policy. Doing so could save you hundreds of dollars on repairs down the road. If you have a Honda then this is the BEST fluid for the gearbox. It is recommended to change your gearbox oil every 20,000 miles in performance Hondas. All rights reserved. Total work time is about 20 minutes. When plug is

removed clean it up and remove all the metal particles that may be magnetized to it. Its a good idea to drive the car before performing the oil change so oil will drain faster and all the suspended particles with it. Replace the drain plug and tighten it with the ratchet. Fill up plug has tendency to be too tight and 17 mm wrench may slip. Try using a 6point wrench to untie the plug. Be very careful as it may slip. Wear protective gloves to avoid injury. When plug is removed clean it up and remove all the metal particles that may be magnetized to it. I prefer to work from the top thats the reason I used this pump, not the one mechanics use to pump oil into transmission from the bottom. Let the hose a couple extra inches to get under the car. Go back under the hood. Stop pumping, remove the hose and replace the plug. When there isnt enough fluid in the gearbox, the Input Shaft Bearing will not be happy in the long run. Make sure the car is level when you fill the transmission. Synthethic posted by CRXSi on Wednesday, March 11, 2009 at 324 PM Could i use synthetic motor oil in there. Snappy idea posted by Craig on Monday, October 20, 2008 at 638 PM Hey, great idea with fillup! Thanks. Understanding how to check your transmission fluid can help prevent an unexpected visit to the Honda service center and keep you behind the wheel of a safer car around Arlington. On frontwheel drive cars, it's usually located to the right of the oil dipstick. Check your owner's manual if you're having trouble finding it. The fluid should be nearly clear, with a pink hue. If it looks dirty or gives off a burnt smell, take it to a service center for a replacement. Then insert it back into the vehicle.

Pull it out again and check the level. If it's under the "Full" marking, you'll need to add more. Be sure not to overfill it. That includes checking your transmission fluid, power steering fluid, and engine oil. As always, you can consult your owner's manual for a more specific maintenance schedule. Before adding transmission fluid, make sure that your engine was running when you checked the fluid level.

If the transmission fluid level on your CRX is low, you need to add fluid through the dipstick tube. Honda has been developed sophisticated transmissions through years and it is critical that you add the exact type of transmission fluid stipulated by your owners manual typically in the back of the manual in a section titled Fluid Capacities. When adding transmission fluid to your CRX, be sure to add it slowly as the transmission fluid capacity is reached quickly and it is difficult to remove excess fluid if you overfill. If you are having problems with the transmission in your CRX, such as clunky shifting or hesitation, check the fluid level first it is amazing how many drivers pay thousands of dollars for transmission work when a half quart of transmission fluid would have fixed the problem.
