Book Descriptions:

Cal spa manuals 2006

The spas adjustable controls allow for a fullycustomizable relaxation experience at the end of every day. This includes upgraded cabinets with premium finish, with the look and feel of natural wood on the exterior and its sleek corners. Sure as Zen appeal! Two person seating means you can relax with company! For roto mold spa manuals, see the section further down on this page. For more information go to www.p65Warnings.ca.gov A couple simple steps on a set schedule can keep your investment lasting long, looking good, and keep you feeling relaxed with every use. The Basics Routine Maintenance. There are a couple simple things to keep an eye on in order to keep your spa optimal for regular use. First off, the most important thing is to use your basic senses. Does your water look clear. Does it smell funny. Does the water feel clean. If you notice anything out of the ordinary about your water, you may need to stay on top of your routine maintenance for your spa. If you notice any leaves or large debris in your water, use a skimmer to scoop up anything you can see. If you notice any smells or scale floating in the water, continue in the article to find out how to remedy these issues. A good thing to regularly check is water chemistry. This is one of the most important things to keep track of when maintaining your spa. A couple test strips or pH test kit are a must have to make sure that your spa water is healthy. The ideal pH balance of your spa should be hovering around the 7.2-7.8 range. Any lower and your water is too acidic. It is important to regularly check pH because any imbalance can hinder the sanitizing agents and promote bacterial growth or cause cloudy or scale buildup in the water. The chemicals needed are pretty straightforward. Quickspaparts.com offers all the chemical test equipment you need! Chlorine Test Strips. Bromine Test Strips. Filter Cleaning Once every two weeks. <http://www.cdluruguaiana.com.br/app/webroot/img/upload/noticias/dialog-3202-manual.xml>

- cal spa manual 2006, cal spa owners manual 2006, cal spa manuals 2006, cal spa manual 2006, cal spa manual 2004, cal spa manual 2006, cal spa manual 2005.

Once your pH balances are in check, but you are still noticing issues with your water flow and filter efficiency, it may be time to take a look at your filter. A good rule of thumb is to remove and clean your filter biweekly to ensure minimal blockages and maximize the life of your filter. A simple cleaning can be done with a soft brush and hose to dig out any large particles and clear the filter for better flow. A deep filter clean is great to pair with a routine water replacement for your spa. Quarterly, you should drain and refill the water in your hot tub. While you do this it is a good idea to do a thorough cleaning of your filter. Instead of just rinsing the filter out with water, we recommend soaking the filter overnight in cleaning agents to maximize filter health. Always be sure to do a final water rinse and dry of the filter before reinstallation. Replacement Annually. With regular spa use, it is recommended to do a full filter replacement annually. After regular cleaning, the filter media begins to break down over time. Annually a full replacement is recommended to ensure a long life for all other parts of the spa. Nothing can substitute a brand new filter, and it will feel as if your spa has been completely revived. The water will be cleaner and will flow better overall. Buy a new filter at quickspaparts.com today. All rights reserved. Duplication without written consent is strictly prohibited.

Important Safety Instructions.

- 1 Basic Spa Information.
- 2 Preparing for Your New Portable Spa
- 3 Planning the Best Location For Your Spa.
- 4 Preparing a Good Foundation for Your Portable Spa.
- 5 Electrical Setup Before Delivery of Your Spa.
- 6 Filling and Powering Up Your Portable Spa.

Never attempt to operate any electrical device from inside the spa. See the section "Cleaning and Maintaining Your Spa" for instructions on draining your spa. With a little preparation and care, your spa will give you many years of enjoyment.

This section has been designed to ensure that your new spa is installed safely and is ready to enjoy as quickly as possible. Your retailer has a wealth of information and experience about how to get the most out of your spa and can provide you with a full line of accessories that are designed to compliment your spa and increase your enjoyment. If the GFCI does not reset, unplug the spa and call your local Cal Spas dealer for service. **DO NOT USE THE SPA!** 2006 Portable Spa Owners Manual Page 7 LTR20061000, Rev. GFCI breakers vary in appearance and wire locations. Before wiring load and feed wires to breaker verify they are being connected to the proper poles. Soft water makes it impossible to maintain the proper water chemistry and may cause the water to foam, which will ultimately harm the finish of the spa and void your warranty. Once the spa has been placed on an approved surface and has been correctly wired by a licensed electrician, inspect all plumbing connections in the equipment area of your spa. The second filtration cycle will begin twelve hours later. The filter cycle duration is preset for two hours. If the spa will not reset, then shut the power off to the spa and call your dealer or service organization. Flow Detection Switch. Pressure switch is not working correctly. Call your dealer or service organization. Press the same sequence to switch back to the standard heating mode. Once in the economy heating mode, Ec will display in the center of the control panel and flash alternately with the water temperature. **NOTE** There is no control panel message displayed while in the standard heating mode;. To set the filtration time, turn off the power to the spa at the GFCI breaker. Turn the GFCI breaker back on at the time of day you would like to start the filtration cycle. The first cycle will start after the spa is powered up. A "Pr" on the topside display will indicate this.

Priming mode will be active for less than 5 minutes at which time the heater will be activated and the water temperature will be maintained in Standard mode. The first cycle will begin 6 minutes after the spa is turned on and the second cycle 12 hours later. The factory has programmed the cycle to last for 2 hours but this can be switched to 4, 6, or 8 hours depending on your requirements. Spa will be shut down for 15 minutes. Check water level and fill spa if water level is low. Make sure pumps are primed water is flowing and filter cartridges are clean. Press any button to reset or wait 15 minutes and spa will automatically reset. A "Pr" on the topside display will indicate this. Priming mode will be active for less than 5 minutes at which time the heater will be activated and the water temperature will be maintained in Standard mode. The high limit or water temperature sensors are

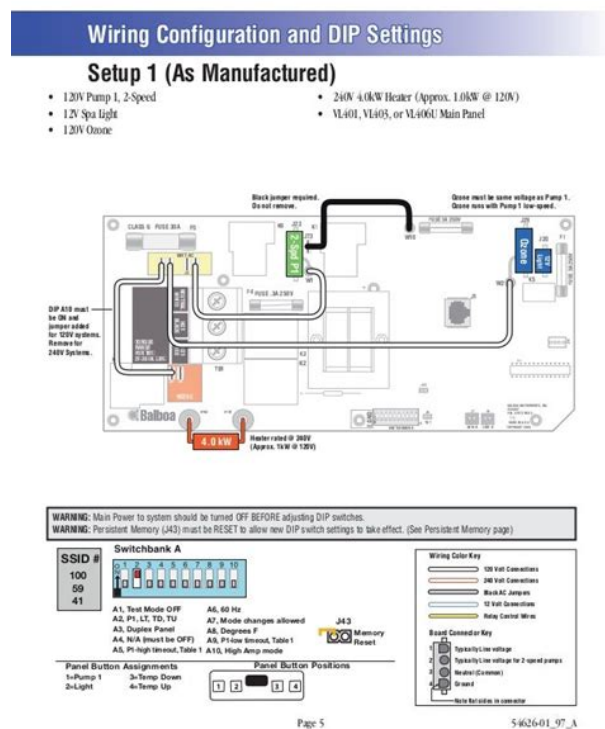

not working correctly. Call your dealer or service organization. A difference in readings between temperature sensors has been detected indicating a possible water flow problem. Make sure spa is filled to proper level and that pumps are primed water is flowing. Press the "DOWN" button to cycle through to the desired mode. Standard Mode This is programmed to maintain the desired temperature. When locked, the panel will display "LOCK". All buttons are frozen except the "TIME" button. Press the "DOWN" button to cycle through to the desired mode. Standard Mode This is programmed to maintain the desired temperature. The panel will display "TEMP LOCK". Periodic Reminder Messages Press the "Mode" button to reset a displayed reminder. Message Frequency Action Require Every 7 days Test and adjust chemical levels per manufacturer's instructions. The sensor that is If the problem persists, contact your dealer or service plugged into the Sensor "A" jack is organization. May appear temporarily in an overheat not working.

Using a Phillips screwdriver, remove the screws to the access panel and open it. Open all filter covers. Remove the filter baskets and filters. Drain your spa completely as described in the instructions above. Remove drain plugs from the front of the pumps. Disconnect the unions from both sides of the pump. The key to clean, clear, and safe water is to fully understand how spa water reacts to users, system operation and chemical use. Add 8oz of Cal Spas "Liquid Filter Cleaner" to the bucket of water. Many of these chemicals will be used with alternative sanitation systems as well.

Spas equipped with the optional Quest 2000 Ozonator will also receive ozone injection into the filtered water for further protection against contaminants during filtration cycles. It accomplishes this without leaving an oily residue behind that is normally associated with common automotive vinyl protectants. Allow spa to dry completely. Allow Fast Sheen to dry until white and powdery. Buff clean with a soft cloth, rotating frequently. Only apply to clean, cool, dry surfaces. Incorrect product usage may cause water clarity issues. These instructions describe basic functions. See the manufacturer's operating instructions for other features and functions. The Marine Grade Stereo Receiver The marine grade audio system uses either the Clarion CMD4 audio system Figure 17 or the Kenwood KTS MP400 audio system. See the manufacturer's operating instructions for other features and functions. The faceplate will gently lower and expose the disk drive Figure 20. Figure 206. Opening the faceplate Insert a disk in the disk drive. Flip up the faceplate. Universal Remote Control Operation The Cal Spas universal remote Figure 21 has been preprogrammed to function with the entertainment system the spa has been configured with. However, in case you need to reprogram the remote, use the following device list for the programming code. Turn the device manually or with the manufacturer's remote control provided. Clarion topside mounted remote control 2006 Portable Spa Owners Manual Page 69 LTR20061000, Rev. A. This comes with everything you need for a high powered, low impact, result achieving workout in total comfort and privacy. Plus you get a spa loaded with incredible therapeutic seating, variable jet massage and generous control options, and the most gorgeous cabinetry on the planet. Palms down, arms extended with elbows slightly bent. You can also exercise one wrist at a time by placing your free hand, thumb out, under the exercising wrist. Hands and fingers should be relaxed.

Finger Curl Curl your fingers into your palm to make a loose fist then straighten them out. Warranty Limitations The 2006 Limited Warranty is void if the spa has been subject to negligence, alteration, misuse, abuse, repairs by nonC.A.I. It will be valuable if service is required. Coast Spas has been a leader in hot tub, spa and swim spa innovation for 20 years. Our highly refined manufacturing process produces the highest quality products on the market today.

www.cocuknorologu.com/image/files/canon-on-screen-manual.pdf

Hot tubs are very unique as they are one of the few consumer products that run outside mostly, 24 hours a day, 7 days a week, 365 days a year and all the while being subjected to both the hottest and coldest environments. Hot tubs create beautiful moments with your family and friends, provide unmatched relaxation and a host of additional health benefits. They can be easily monitored and maintained with only a small amount of knowledge and effort. Improper water care water chemistry is by far the largest contributor to premature spa issues. In a chemically unbalanced environment plastic and rubber components such as pump orings and jets will be impacted negatively. This can lead to a host of problems that can be timeconsuming to repair. This is true for ALL hot tubs and not specific to Coast Spas. If you are an owner of any brand of hot tub, you will want to maintain your hot tub in order to keep the components in great shape. Your local Coast Spas dealer will also be able to test and advise you on proper maintenance techniques and requirements. What do I do Ensure that you select the document that represents your hot tub. The establishment from which you purchased your hot tub is knowledgeable and may even be able to assist you to correct the problem over the phone. If any replacement parts are needed, there is a good chance they will have them in stock. Need help finding your nearest dealer. We are always here to help a Coast Spas hot tub owner, no matter the age of your tub. Note that Coast Spas is the manufacturer and distributes products to independent dealers around the world. If you require assistance, our mandate will be to connect you with your closest dealership or service centre to ensure you are receiving the personalized assistance you are looking for. We reply to all requests in the order in which they were received and response times can vary depending on volume.

Manufactured January June 2015 Manufactured July Dec 2015 To ensure maximum water quality at all times, you should replace the filter cartridge every six months, or earlier as necessary. The filter cartridge is designed to be thrown away. Attempts to reuse the filter cartridge may result in the rerelease of unwanted particles back into the hot tub The frequency will depend on a number of variables including frequency of use, number of bathers and attention paid to the water quality maintenance. You will know it is time for a change when you can no longer get the normal feel or sparkle to the water, even though the key water balance measurements are all within the

recommended ranges. All pillows have plugs within the pillow itself. To remove the pillow, grab the bottom edge firmly and pull outward. This will allow the pillows to pop out from the receptacle in the spa shell. To reinstall the pillow you will align the pillow plug with the receptacle. Failure to do so may damage the spa pillows. We recommend that pillows be washed each time you drain your spa. Generally dirt and stains will not adhere to the surface. To properly clean the surface, we recommend wiping it with a soft damp cloth or sponge using household soap or liquid detergent and rinsing thoroughly with fresh water. Harsh chemicals should never be used on acrylic surfaces. Damage to the shell due to the use of harsh chemicals is not covered under the warranty. Extreme heat could cause damage to the acrylic surface. This action may induce an electrical short in the hot tub's electrical equipment. With proper care and maintenance, your cedar cabinet should maintain its beauty for many years. Coast Spas recommends touchup or restaining of the cabinet every three to four years depending on your environment. Contact your Dealer for restaining procedures. This cabinet is manufactured so that it won't crack, peel, blister or delaminate even after prolonged exposure to the elements.

We recommend wiping the cabinet with a soft damp cloth or sponge using household soap or liquid detergent and rinsing with fresh water thoroughly. DO NOT use abrasive cleansers or material as this may damage the surface. We recommend lightly brushing the cabinet with a SOFT bristle brush to remove any dirt or stains. For more information on the care of your Slate cabinet, please contact your Coast Spas Dealer. We recommend wiping the cabinet with a soft damp cloth or sponge using household soap or liquid detergent and rinsing with fresh water thoroughly. There are also many stainless steel appliance cleaners on the market today that will help in the care and maintenance of the stainless steel cabinet. DO NOT use abrasive cleansers or material as this may damage the surface. Your cover needs to be cleaned and conditioned because vinyl can be dry and become brittle, spoiling your spa's appearance. Dry, brittle vinyl can also tear at the seams and stress points. Quality materials, internal sewn reinforcing and careful workmanship can only go so far against the ravages of Mother Nature. See the specific Warranty card enclosed with your cover for further details. Nor should you place any heavy object on top of the cover as this may damage the structure. Your Coast Spas Dealer carries a wide variety of care and maintenance products. Choose a pleasant day each month to remove your cover from the spa and lay it on a flat surface accessible by garden hose. Douse the cover with a healthy amount of water from the hose or a bucket to rinse away loose dirt or debris. Using a soft bristle brush and a mild solution of dishwashing liquid about one teaspoon of detergent to two gallons of water, and with a gentle circular motion, scrub the cover clean. Be careful not to let any areas of the cover dry before they're thoroughly rinsed. Now apply the vinyl conditioner as directed on the container. Massage the conditioner into the cover in a gentle but firm manner.

Before replacing the cover on your spa, wipe and rinse any dirt from the bottom of the cover. When you are ready, put the cover on the spa. Use sparingly, then immediately apply conditioner to that area. This warranty specifically covers leaks from the jet fittings, drain fittings, internal plumbing, filter canister and light lens. This warranty specifically covers the cabinet's structural integrity excluding surface stain or color. The cosmetic finish is warranted to be free from defects at the time of initial delivery to the original consumer purchaser. Fading and weathering of the surface will naturally occur over time and are not considered warrantable defects. This warranty specifically covers the cabinet's structural integrity excluding surface stain or color. Fading and weathering of the surface will naturally occur over time and are not considered warrantable defects. This warranty specifically covers the cabinet's structural integrity excluding surface stain. Fading and weathering of the surface will naturally occur over time and are not considered warrantable defects. This specifically covers the ozone generator's ability to create ozone. Due to environmental conditions out of our control, we are unable to warranty discolorations or corrosion on stainless steel parts. The following items are not included in this limited warranty but are warranted to be free from defects in

material or workmanship at the time of delivery to the original consumer purchaser from the dealer. Filter cartridge, dirty filters, air locks, incorrect water chemistry, loose unions, pinched or misaligned gaskets, pump seals, closed water valves, closed jets, fuses, expired light bulbs, disconnected power cords and spa pillows. This warranty extends through the selling dealer to the original purchaser at the original site of installation. This warranty does not apply to special offers and events.

The Coast spa's warranty terminates upon any transfer of ownership or if the spa is installed in a commercial application. Warranty begins at the spa's date of sale to the consumer or 6 months after manufacture, whichever comes first. Exchange Warranty All warrantable products will be exchanged with New, Refurbished and or Like product available at the time of the Warranty transaction. For more information, see their warranties in the owner's information package that was delivered with your spa. Upon proof of purchase, the dealer will correct the defect subject to the terms and conditions of this warranty. There will be no charge for parts or labor to repair the defect if the defect is determined to be covered under the terms and conditions of this written limited warranty, although reasonable repair person travel charges and administration fees may be assessed. If Coast Spas Manufacturing Inc. We may also require that the spa be returned to our facility for assessment. In such an event, all removal, replacement, installation and shipping costs are the responsibility of the spa owner. At time of inspection, by a CSMI representative we will determine if the spa is repairable. If not, we will provide a replacement spa on a prorated basis. The spa owner will be charged one percent of the retail cost for each full month of ownership from the date of purchase. The replacement spa warranty will be equal to the balance, if any, remaining on the original spa. This Limited Warranty is void if CSMI or its designated representative determines that the spa has been improperly installed or improperly supported See instruction Manual for installation instructions, subject to alteration, misuse or abuse, or if any repairs on the spa are attempted by anyone other than an authorized representative of Coast Spas Manufacturing Inc.; or if failure is caused by accident, acts of nature, acts of God, or other causes beyond the control of CSMI.

Neglect, misuse and abuse include any installation, operation, or maintenance of the spa other than in accordance with the instructions contained in the owner's manual provided with the spa, including, but not limited to damage caused by operation outside the range of 34 degrees Fahrenheit and 116 degrees Fahrenheit or 1 degree Celsius and 47 degrees Celsius; the failure to maintain proper water chemistry and chemical balance; the use of abrasive or improper chemicals. Alterations shall include any components or plumbing change, electrical conversion, or the addition of any sanitation or water purification device or heating system which contributes to a component or unit failure or unsafe operating system. Cosmetic scratches, gouges and crazing are not considered cracks and are not covered. A phenomenon referred to as "crazing" in the spa industry could occur to any metal essence, blush or opal acrylic. This phenomenon is strictly cosmetic and does not affect the spa's structural integrity. This phenomenon would not be a warrantable defect. This Limited Warranty does not provide coverage for the spas cover see separate manufacturer's cover warranty, any item attached to, or installed on, including cover lifts or gazebos, or for gaining access to any component for repair or replacement. The conditional length year leak warranty is limited to leak repairs by the Coast Spas Authorized Service Centre only, and limited to a maximum labor coverage within the length years. The spa owner accepts liability for repair work performed by anyone other than a designated Coast Spas representative. Under no circumstances shall CSMI, or any of its representatives, be held liable for injury to any person, or damage to any property, however arising. In no case, shall CSMI be liable, for any reason or cause, for any cost in excess of the amount paid for the original spa purchase. No other warranties, expressed or implied, are valid.
